

CSS Developments at Diamond Light Source

Mark Heron, on behalf of Will Rogers, Matt Furseman, Tom Cobb, Giles Knap, Nick Battam, Ian Gillingham and Friederike Jöhlinger

Introduction

- Can we use CSS?
- Developments of CSS at Diamond
 - CSS as an EDM Replacement
 - CSS as an Interface to the Fast Archiver
 - CSS for Photon Beamline Control
- Summary

Why choose CSS?

- CSS provides a lot of infrastructure
- CSS is used widely in the EPICS community
 - Several active developers
 - Too big to fail (!)
- CSS conversion tools are improving
- Common client side platform between Controls and Data Acquisition at Diamond (DAWN and GDA)
 - Subject to many caveats
- CSS works on Windows

Why not choose CSS?

- GUIs are too slow
- GUIs don't look nice
- Eclipse works better on Windows than Linux
- (hypothetical) we can't get BOY to perform well enough
- (hypothetical) CSS crashes too regularly
- (hypothetical) we can't convert enough screens accurately enough
- Do we like the Eclipse platform?

CSS as an EDM Replacement

23/10/2014

CSS Developments at Diamond Light
Source

Why Replace EDM?

- Concern EDM is nearing end of life
- EDM's libraries are being phased out
- EDM is has limited support
- See problems with EDM on each OS uplift
 - Fonts, operation over NX
- We could benefit from the rest of the infrastructure CSS provides

Can CSS replace EDM?

- To use CSS to replace EDM
 - We need to be able to programmatically and accurately convert 100s of screens
 - Screens use lots EDM features and tricks
 - There are too many screens to hand build them all from scratch in CSS
 - We need operators to be able to use windows across Linux workspaces
 - CSS out-of-the box isn't a direct replacement EDM

Things we're working on

- CSS
 - Eclipse 4, and EDM Mode
- The EDM to CSS Converter
 - Batch conversion
 - Many tweaks to the converter
- CSS widgets
 - 'Enum' PVs – used for selecting items in a screen
 - 'Calc' PVs
 - 'Menu mux' buttons
 - Nudge buttons
 - Click throughs

EDM Mode

- Machine operators understand the operation of accelerators through the UI
 - Sensitive to changes in UI
 - This can impact operational performance/reliability
- Can we persuade CSS to resemble EDM?
 - Separate windows per UI (optional)
- We've got pretty close
 - CSS EDM Mode

CSS EDM Mode

- Panels launched in an SWT Shell

CSS-EDM Mode: tricky bits

- Right-click context menu has been lost
 - No zooming on graphs
- BOY handles clicks differently to EDM
 - If one widget is above another, the lower widget does not receive a click
- Fonts don't map!
- Graphs are still a difficulty

Converting Panels

CSS De

CSS Performance

- CSS uses a lot of memory
 - EDM doesn't
- Some screens use a lot of CPU
 - We need to track them down
- Occasionally CSS crashes
 - Occasionally EDM crashes
- Screens load slightly slower than EDM (acceptable)
 - We may need to live with this
- Performance doesn't appear to decay over time
 - Stable over a weekend
- Memory scales with number of screens open
 - 2GB is enough for a lot of screens
 - If you run out of memory, CSS will be unrecoverable

In Summary EDM Mode

- Demonstrated that CSS can be used as a replacement for EDM
 - Direct panel translation
 - Compatible behaviour
 - Acceptable performance
- Still work to do on conversion, workspace management, performance, stability
- Next stage is a project to manage the conversion of all operational panels, testing, deployment

Fast Archiver Data Browser

23/10/2014

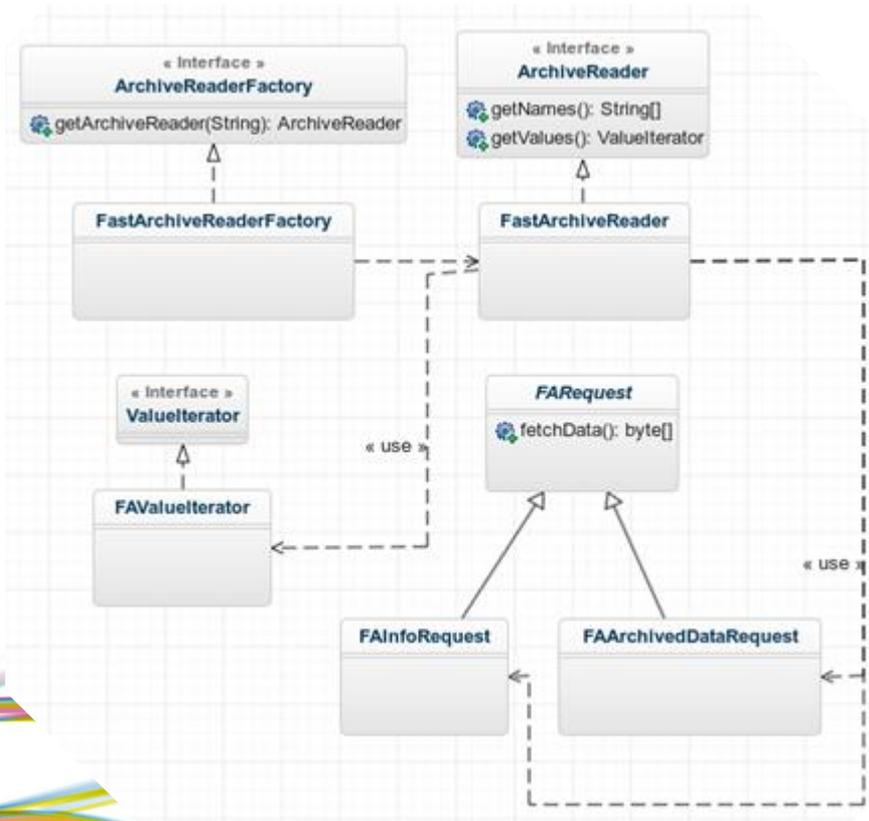

CSS Developments at Diamond Light
Source

CSS Interface to Fast Archiver

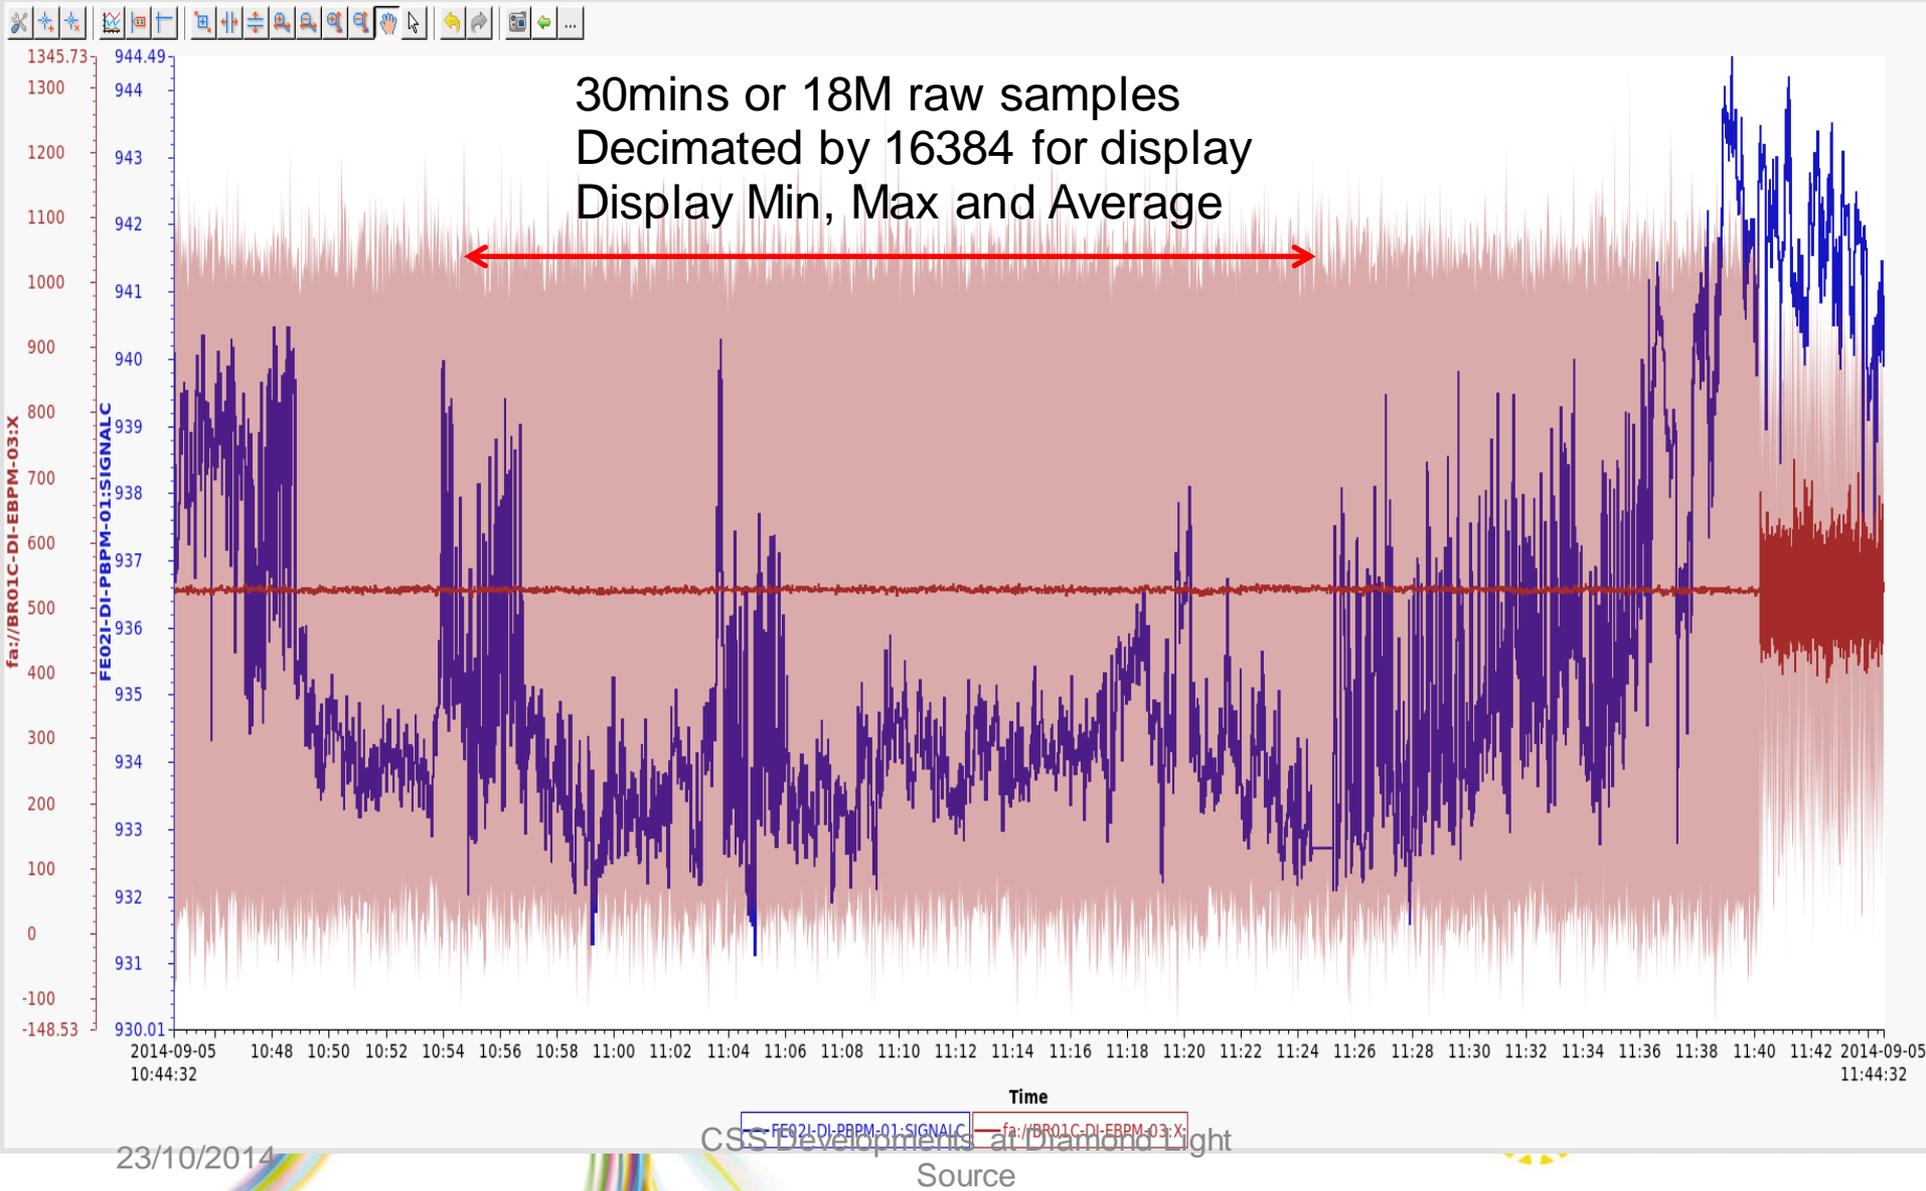

- Fast Archiver (FA)
 - Record 255 BPMs X and Y data at 10kHz
~21MB/sec
 - 16 days~30TB ring buffer
 - Calculate decimated (by 64 and 16384) versions of the data
 - Decimated sample rates: 150 Hz and 0.75 Hz
 - Integrate the Fast Archiver into CSS's Data Browser
 - Provide integration of FA data and CA PVs

Fast Archive Reader

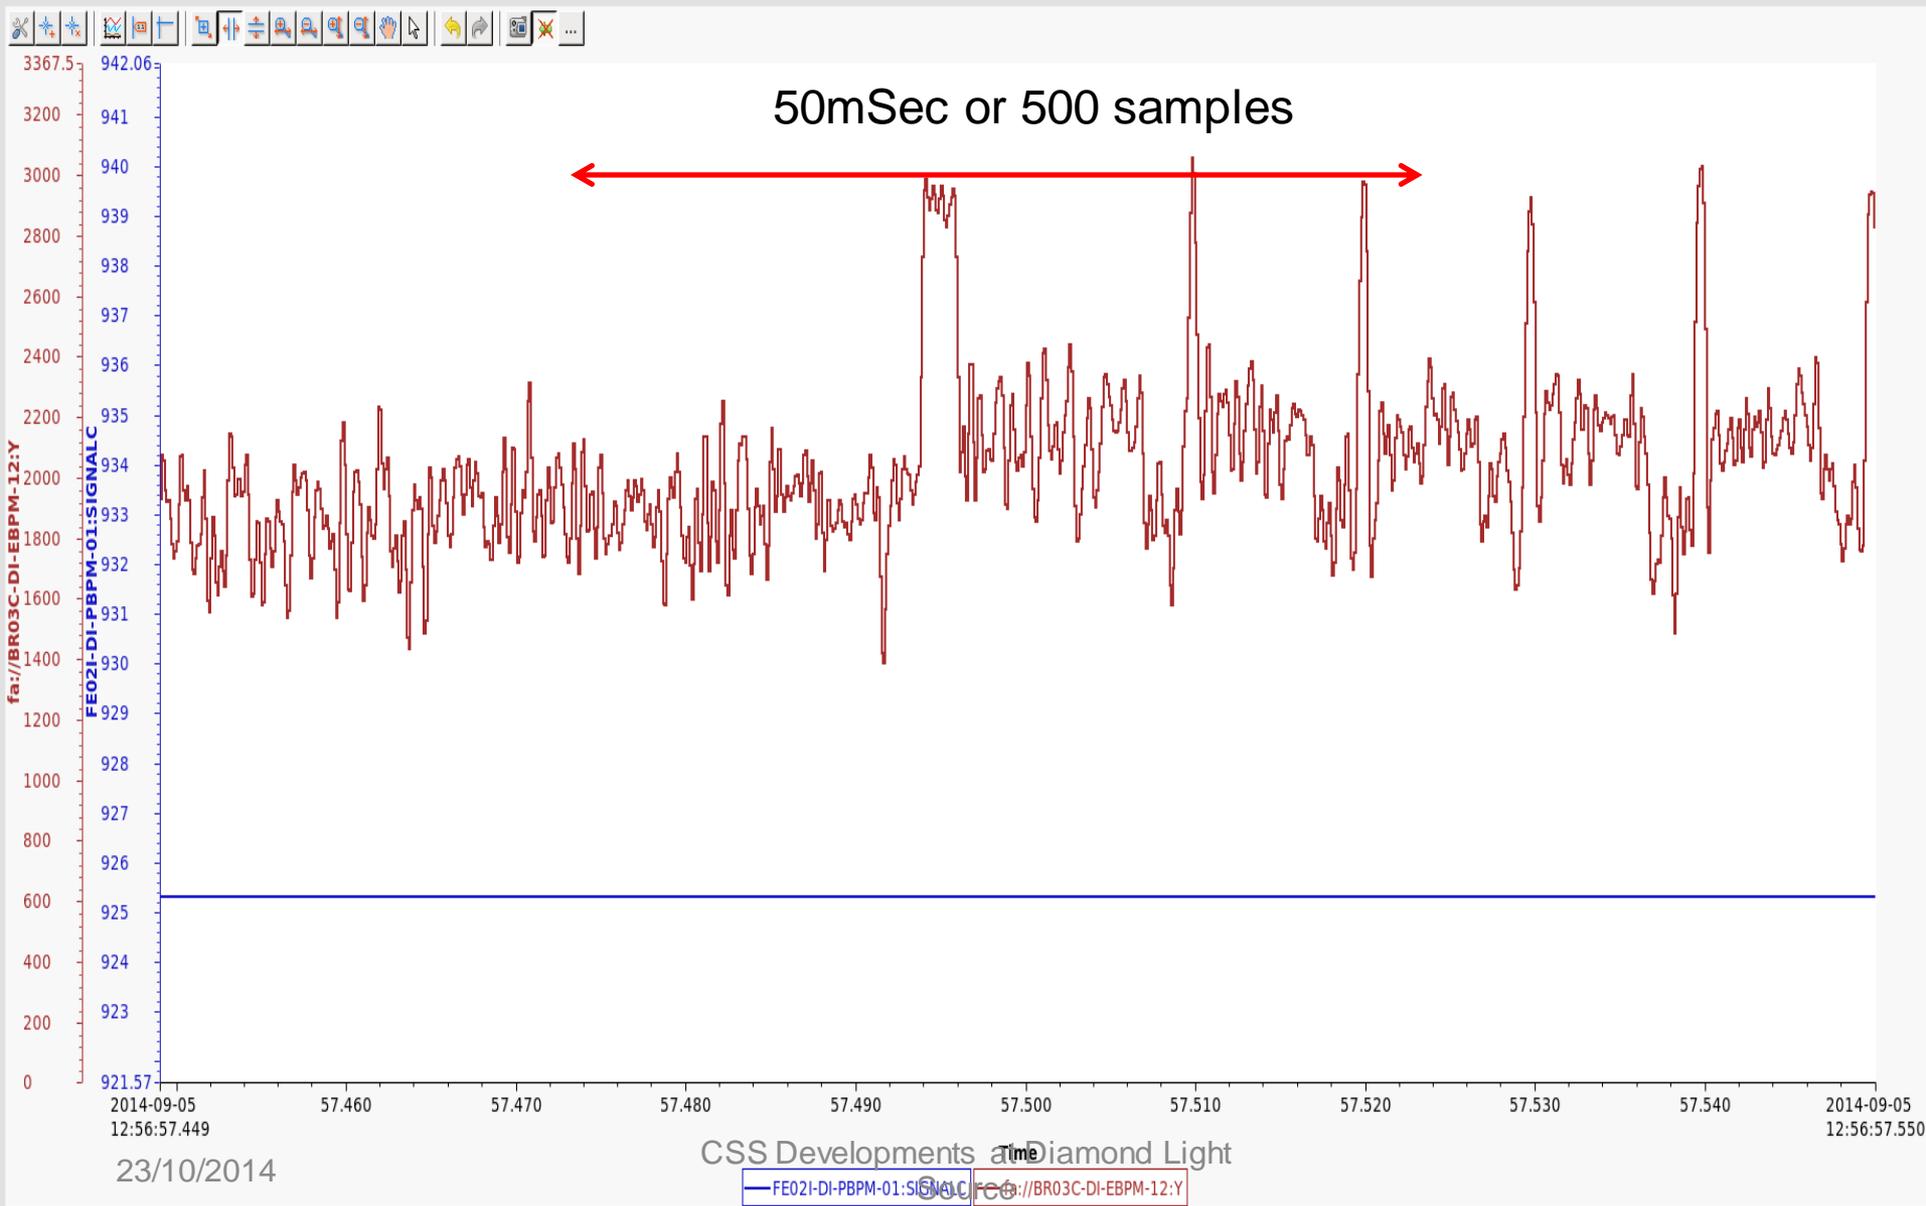

- FA data source provide Min/Max and Std dev of data
 - Added option to CSS for Std dev
- CSS assumption every item corresponds to a PV
 - FA Archiver items do not (at least, not directly)
 - Needed to simulate live PVs

Fast Archiver in DataBrowser

Zoomed In

- The Fast Archiver Data Browser interface implemented by Friederike Jöhlinger
 - Summer intern at Diamond

CSS for Photon Beamline Control

Beamlines what doesn't work?

- Proliferation of windows obscures synoptic
- Autogenerated screens useful, but are too inflexible
- Client side fonts don't work well over NX and will probably stop working in RHEL8
- Can't easily share screens between EPICS and GDA
- Very little integration between tools, e.g. Striptool and archive viewer

What might Beamline CS-Studio look like?

The screenshot displays the CS-Studio software interface, which is used for controlling and monitoring a beamline system. The interface is divided into several panels:

- Top Panel:** Contains the menu bar (File, Edit, Search, Run, CSS, Window, Help), a toolbar with various icons, a zoom level of 100%, and a "Quick Access" search box. On the right, there is a "Quick Access" button and an "OPI Runtime" indicator.
- Left Panel (S2.YPlus):** Shows the "Property Value" table for the "Basic" section of the "Y Plus Motor".

Property	Value
Y Plus Motor	32.78660 mm
0.00100	- 32.78660 +
Kill	Kill
High Limit	<input type="checkbox"/>
Low Limit	<input type="checkbox"/>
Calibration	
Offset	Frozen
Offset Mode	0.00000
Motor Step Size	0.00010
Encoder Step Si	0.00010
Use Encoder if P	Yes
- Center Panel (top.opi):** Displays four motor control panels, each showing the motor name, position (32.78660 mm), step size (0.00100), and temperature (32.5 C). The motors are: Y Plus Motor & Temperature, X Minus Motor & Temperature, X Plus Motor & Temperature, and Y Minus Motor & Temperature.
- Bottom Panel (Synoptic):** Shows a schematic diagram of the beamline. It includes components like CAM1, WEB1, S1, D1, DCM, D2, F1, and T1. The status "OH Searched" is indicated for the left side, and "EH not searched" is indicated for the right side.

How does it solve our problems?

- Proliferation of windows obscures synoptic
 - Shrunk synoptic bar at the bottom of the screen
 - Each icon shows alarm status
 - Action to acknowledge alarm status
 - Scripting to make beam stop at blocking component and allow right-left flipping

How does it solve our problems?

- Proliferation of windows obscures synoptic
 - New “Detail widget” that allows searching/filtering of property names
 - Tabbed areas for component views and detail widgets

The screenshot displays a software interface with two main windows. The left window, titled 'S2.YPlus', contains a table with the following data:

Property	Value
Basic	
Y Plus Motor	32.78660 mm 0.00100 - 32.78660 +
Kill	
High Limit	
Low Limit	
Calibration	
Offset	Frozen
Offset Mode	0.00000
Motor Step Size	0.00010
Encoder Step Si	0.00010
Use Encoder if P	Yes

The right window, titled 'top.opi', contains four motor control widgets:

- Y Plus Motor & Temperature: 32.78660 mm, 0.00100 - 32.78660 +, 32.5 C
- X Minus Motor & Temperature: 32.78660 mm, 0.00100 - 32.78660 +, 32.5 C
- X Plus Motor & Temperature: 32.78660 mm, 0.00100 - 32.78660 +, 32.5 C
- Y Minus Motor & Temperature: 32.78660 mm, 0.00100 - 32.78660 +, 32.5 C

Summary

- Diamond is looking at using and extending CSS
- Looks promising that all future UIs will be CSS based
- We will have flavours of CSS
 - True Eclipse CSS
 - EDM like CSS

Thank You
